Accessories

Sump units are used as the collection point within the Channel Drain run. A pipe is connected to the sump unit which allows the water to flow away.

Access Boxes are used as part of the run where it can be filled and removed for access, such as cleaning.

End Caps are used at either end of the run to stop the flow of water. **End Caps Outlets** are used at either end of the run to allow a 110mm pipe to be connected.
