THRESHOLD CORTEN

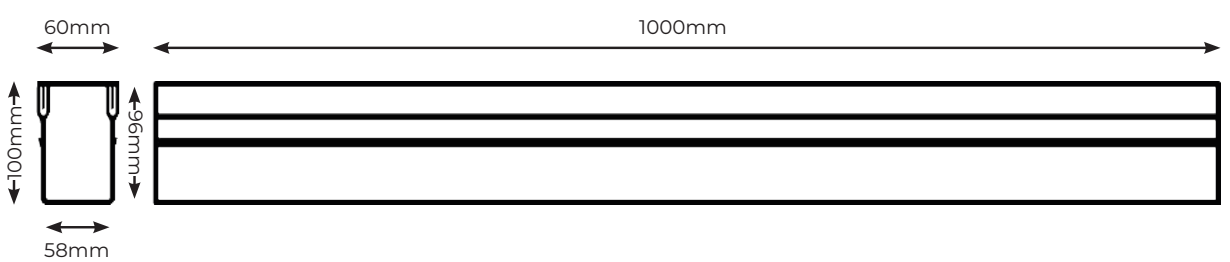
+ Corten Steel Safeheel Slotted Grating

The Threshold Corten is a 1-metre channel suitable for high-end garden or landscaping projects. This channel works aesthetically with other Corten products like planters and walls, as it allows you to intensify the space and textures used.

The Corten effect is created by allowing the channel to develop a rusty appearance after it has been exposed to the elements. This rustic look to the channel is called patina, a layer of oxidation. This layer protects the metal from any further corrosion. You may need to be cautious when rainwater hits the channel as it may turn a rusty brown colour, especially during the patina formation. This means it may leave stains when it comes in contact with other porous surfaces.

Details

Material : Composite
Load Class : A15 (1.5 Tonne)
Length : 1000mm
Slot Width : 8mm
Depth : 96mm
Grating : Corten Steel
Accessories : Corner Unit, End Cap, End Cap Outlet, Bottom Outlet, Connector



Accessories

End Caps are used at either of the run to stop the flow of water.

Corner Unit is a key element in ensuring proper water management and drainage in areas where paths, patios, or driveways meet at 90°angles.

End Cap Outlet can be used to connect the channel horizontally to an outlet using a 50mm diameter pipe.

Bottom Outlet can be used to connect the channel vertically to an outlet using an 80mm diameter pipe.

Connectors provide a watertight connection between channel
